

WEB-OS CRM Dashboard Full Upgrade Specification

Document Version: 1.0

Project: WEB-OS Cold Outreach CRM

Purpose: Full list of required business, security, workflow, commission, and dashboard edits

Status: Upgrade specification based on the already-created conceptual CRM overview

Target Users: Admin, Manager, Supervisor, Caller, Closer, Developer

1. Purpose of This Document

The previous WEB-OS CRM overview already explains the core idea of the platform:

- Outbound dialer
- Lead management
- Travel agency outreach
- Caller workflows
- Lead locking
- Outreach scripts
- Pipeline synchronization
- Dashboard roles

This document is not a replacement for that overview.

This document is a **full upgrade and correction file** that explains exactly what must be added, changed, or improved in the CRM so it can support a real commission-based outreach business.

The CRM must not only help callers make calls. It must also protect:

- WEB-OS leads
- Caller commissions
- Client data
- Deal tracking
- Payment tracking
- Lead ownership
- Business reputation
- Manager control
- Delivery workflow

The dashboard must support the full flow:

```

graph TD
  A[Lead Imported] --> B[Lead Assigned]
  B --> C[Caller Opens Lead]
  C --> D[10-Minute Active Call Lock]
  D --> E[Call or Outreach Action]
  E --> F[Outcome Logged]
  F --> G{Interested?}
  G -- No --> H[Follow-Up / Lost / Do Not Contact]
  G -- Yes --> I[Lead Ownership Created]
  I --> J[Deal Created]
  J --> K[Manager / Closer Reviews]
  K --> L[Proposal / Price / Scope Approved]
  L --> M[Client Pays Deposit]
  M --> N[Commission Pending]
  N --> O[Project In Production]
  O --> P[Final Payment]
  P --> Q[Commission Completed]
  Q --> R[Project Delivered / Closed Won]

```

2. Main Business Rules the CRM Must Enforce

The CRM must be built around the following business rules.

2.1 Callers Do Not Automatically Close Deals

At the beginning, callers are mainly appointment setters and lead qualifiers.

Callers can:

- Contact leads
- Explain the basic offer
- Qualify interest
- Book calls or meetings
- Send approved demo links
- Add notes
- Follow up
- Move interested leads into the deal pipeline

Callers cannot:

- Set final prices alone
- Promise final delivery dates alone
- Promise free maintenance

- Promise unlimited revisions
- Promise extra features
- Collect client money
- Change project scope
- Give discounts without approval
- Mark a deal as closed without confirmed payment

2.2 Client Payment Defines a Closed Deal

A lead is not closed because the client says “yes.”

A deal becomes closed only when client payment is confirmed.

The CRM must clearly distinguish between:

- Interested lead
- Meeting booked
- Proposal sent
- Waiting deposit
- Deposit paid
- In production
- Waiting final payment
- Closed won
- Closed lost

2.3 Commission Is Paid Only From Received Money

Caller commission must be calculated only from money actually received from the client.

If the client pays in two parts, commission is paid in two parts.

Example:

- Client project price: 80,000 DZD
- Client pays deposit: 40,000 DZD
- Caller commission rate: 20%
- Caller receives: 8,000 DZD

If the client never pays the remaining 40,000 DZD, the caller does not receive commission from money that WEB-OS never received.

2.4 Standard Commission Logic

The CRM must support flexible commission rates:

Caller Contribution Level	Commission Rate
Basic qualified lead / meeting booked	20%
Strong follow-up + serious qualified lead	25%
Caller helps close deal with approved scope	30%

The system must not assume all callers automatically get 30%.

Commission must be configurable per deal by Admin or Manager.

2.5 Lead Ownership Must Be Protected

If a caller brings a lead and logs it properly, the CRM must protect their ownership.

If the client later contacts WEB-OS directly, the original caller still keeps the commission if the lead becomes a paying client within the protected period.

Default ownership protection:

- 60 days from valid interested lead creation

Default inactivity expiration:

- 14 days without caller update or follow-up

3. Required Role System Updates

The CRM must have strict role-based access.

3.1 Roles

The system must include these roles:

1. Admin
2. Manager
3. Supervisor
4. Closer
5. Caller
6. Developer
7. Read-only Auditor

3.2 Admin Permissions

Admin can:

- View all leads
- View all deals
- View all callers
- View all commissions
- View all payments
- Import leads
- Export leads
- Assign leads
- Reassign leads
- Disable users
- Edit commission rates
- Mark commission as paid
- Manage dashboard settings
- View audit logs
- Create trap leads
- Resolve disputes
- Delete or archive data
- Access all analytics

3.3 Manager Permissions

Manager can:

- View all leads
- View all deals
- View caller performance
- Assign or reassign leads
- Review interested leads
- Create proposals
- Set project scope
- Set deal value
- Confirm payment status
- Approve commissions
- Review disputes
- View audit logs related to sales activity

Manager cannot:

- Delete full database
- Export full database unless Admin allows it
- Change system security settings

3.4 Supervisor Permissions

Supervisor can:

- View assigned callers
- View assigned caller activity
- Review notes
- Help with follow-ups
- Approve basic lead statuses
- Flag suspicious activity
- Suggest lead reassignment

Supervisor cannot:

- Export leads
- Edit commissions
- Confirm payments
- Delete leads
- View all financial data unless allowed

3.5 Closer Permissions

Closer can:

- View qualified interested leads
- View deal pipeline
- Contact serious clients
- Add proposal notes
- Update deal stages
- Request price approval
- Request scope approval
- Mark deal as waiting deposit
- Add closing notes

Closer cannot:

- Confirm payment unless allowed
- Edit caller ownership
- Export leads
- Delete leads
- Change commission rate

3.6 Caller Permissions

Caller can:

- View assigned leads only

- View one lead at a time in dialer mode
- Call assigned leads
- Open approved outreach channels
- Add call logs
- Add notes
- Set follow-up dates
- Mark valid statuses
- Upload proof
- View their own commissions
- View their own performance
- View their own accepted agreement version

Caller cannot:

- View full database
- Export leads
- Bulk copy numbers
- See other callers' leads
- Delete leads
- Edit old activity logs
- Confirm payments
- Edit commission rate
- Mark commission paid
- Change ownership manually
- Reassign leads
- Access admin settings
- Access database credentials
- Access source code secrets
- Access other callers' private notes

3.7 Developer Permissions

Developer can:

- View projects in production
- View client requirements approved by Manager
- View delivery status
- Add technical progress notes
- Upload preview links
- Mark technical milestones

Developer cannot:

- View full lead database
- View caller private performance unless needed
- Edit commissions
- Contact leads directly unless assigned
- Change payment status

- Export leads

3.8 Read-Only Auditor Permissions

Auditor can:

- View selected audit logs
- View selected disputes
- View selected payment/commission records

Auditor cannot:

- Edit anything
-

4. Caller Onboarding Flow

Before a caller can access any lead, the CRM must force onboarding.

4.1 Required Onboarding Steps

A caller account must not become active until:

1. Caller profile is completed
2. Phone number is added
3. Email or contact method is added
4. Caller reads the agreement
5. Caller accepts the agreement
6. Caller types an explicit acceptance phrase
7. CRM saves the acceptance record
8. Manager approves caller account
9. First lead batch is assigned

4.2 Agreement Acceptance Screen

Before dashboard access, the caller must see:

- WEB-OS Caller Guidelines & Commission Agreement
- Version number
- Date
- Main summary of important rules
- Checkbox: "I have read and understood the agreement"
- Text input requiring exact phrase:
- Confirmation button

4.3 Saved Acceptance Record

The CRM must save:

- Caller ID
- Caller full name
- Agreement version
- Date and time
- IP address if available
- Device/browser if available
- Exact acceptance text
- PDF or Markdown version accepted
- Manager who approved the account

4.4 If Agreement Is Updated

If the agreement changes, the CRM must require callers to accept the new version before continuing work.

5. Lead Protection and Anti-Theft System

Lead theft is one of the biggest risks.

The CRM must be designed so callers cannot easily steal, export, or mass-copy the lead database.

5.1 No Full Database Access for Callers

Callers must never see the full master database.

They must only see:

- Leads assigned to them
- One active lead at a time in dialer mode
- Their own follow-ups
- Their own lead history

5.2 One-Lead-at-a-Time Dialer

The caller dashboard should not show a big table with all phone numbers.

Instead, use a controlled dialer flow:

1. Caller clicks "Get Next Lead"
2. CRM shows one lead card
3. Lead is locked for active work

4. Caller calls or messages
5. Caller must log outcome
6. Caller can then move to the next lead

The system should prevent callers from opening many leads without logging outcomes.

5.3 Daily Lead View Limits

Default limits:

Caller Trust Level	Max New Leads Viewed Per Day
New caller	50
Normal caller	80
Trusted caller	120
Senior caller	Custom

Admin can change these limits.

5.4 Suspicious Activity Detection

The CRM must flag suspicious behavior.

Examples:

- Caller views many leads quickly
- Caller opens 50 leads but logs only 3 calls
- Caller copies many phone numbers without outcomes
- Caller skips too many leads
- Caller opens many social links without notes
- Caller repeatedly views leads outside working hours
- Caller stops working after viewing many leads
- Caller tries to inspect network/API requests
- Caller attempts unauthorized export

5.5 Suspicious Activity Actions

The CRM should support:

- Warning alert to Admin
- Temporary caller freeze
- Require manager review
- Reduce daily lead limit
- Disable caller account
- Mark account as under investigation

5.6 No Export for Callers

Caller accounts must not have:

- CSV export
- Excel export
- Print list
- Bulk select
- Copy all button
- API token
- Full table download
- Database credentials
- Browser-visible full lead JSON payload

5.7 Watermarking

Every caller lead page should include visible watermark:

Viewed by: [Caller Name] | [Caller Phone/ID] | [Date & Time]

The watermark should appear on:

- Lead card
- Detail page
- Outreach screen
- Print view if any
- Screenshot-sensitive areas

5.8 Trap Leads / Canary Leads

The CRM must support trap leads.

A trap lead is a controlled lead used to detect theft.

Trap lead examples:

- Phone number controlled by WEB-OS
- Friend's business account
- Fake test agency
- Unique Instagram test profile
- Email controlled by WEB-OS

Each caller batch can contain unique trap leads.

If the trap lead is contacted outside the dashboard process, the Admin can identify which caller likely leaked or stole the lead.

5.9 Lead Access Logs

The CRM must log:

- Who viewed the lead
- When they viewed it
- How long they viewed it
- Whether they copied phone number
- Whether they opened WhatsApp
- Whether they opened Instagram
- Whether they opened email
- Whether they logged outcome
- Whether they skipped
- Whether they returned later

5.10 Lead Theft Investigation Panel

Admin must have a panel for suspected theft.

It should show:

- Caller activity timeline
 - Leads viewed
 - Leads copied
 - Trap leads touched
 - Unusual behavior alerts
 - Messages/call proof if available
 - Caller notes
 - Account login history
 - Final admin decision
-

6. Lead Assignment System

6.1 Lead Batch Assignment

Admin or Manager can assign leads by:

- City
- Wilaya
- Niche
- Google rating
- Has website / no website
- Social media activity
- Lead source

- Priority score
- Random batch
- Manual selection

6.2 New Caller Batch Size

New callers should receive small batches.

Recommended default:

- First batch: 50 leads
- Second batch: 50–100 leads if performance is clean
- Larger batches only after trust is built

6.3 Lead Assignment Fields

Each lead must include:

- Assigned caller ID
- Assigned by
- Assigned date
- Assignment batch ID
- Assignment reason
- Current ownership status
- Current lock status

6.4 Lead Reassignment

Leads may be reassigned if:

- Caller inactive for 14 days
- Caller account disabled
- Caller abandons leads
- Lead is not owned
- Lead has no valid activity
- Manager manually decides after review

Reassignment must be logged in audit history.

7. Lead Locking System Updates

The original CRM contains a 10-minute lock lease.

This must be expanded into two lock types.

7.1 Active Call Lock

Purpose:

Prevent two callers from contacting the same lead at the same time.

Default duration:

- 10 minutes

When active:

- Other callers see lead as locked
- Caller must log result or release lock
- Lock expires automatically if abandoned

7.2 Ownership Lock

Purpose:

Protect caller commission.

Created when:

- Caller contacts lead
- Lead shows interest or progress
- Caller logs valid notes
- Caller sets status such as Interested, Callback Scheduled, Meeting Booked, Decision Maker Reached, Proposal Requested

Default duration:

- 60 days

Ownership can expire if:

- No activity for 14 days
- Caller removed
- Lead marked invalid
- Manager resolves dispute
- Caller violated rules

7.3 Lock Display

The CRM must show:

- Active call lock owner

- Lock expiration timer
 - Ownership owner
 - Ownership start date
 - Ownership expiry date
 - Last activity
 - Ownership status: Active / Expired / Disputed / Reassigned
-

8. Lead Status System

The status system must be precise.

8.1 Required Lead Statuses

Use these statuses:

- New
- Assigned
- Locked for Call
- Called - No Answer
- Called - No Response After Multiple Attempts
- Wrong Number
- Bad Lead Data
- Not Interested
- Do Not Contact
- Needs Follow-Up
- Callback Scheduled
- Interested
- Decision Maker Reached
- Meeting Booked
- Demo Sent
- Proposal Requested
- Proposal Sent
- Waiting Client Response
- Waiting Deposit
- Deposit Paid
- In Production
- Delivered
- Waiting Final Payment
- Closed Won
- Closed Lost
- Refunded / Disputed

8.2 Status Rules

The CRM must prevent wrong status usage.

Examples:

- Caller cannot mark Closed Won
- Caller cannot mark Deposit Paid
- Caller cannot mark Commission Paid
- Caller cannot mark Final Payment Paid
- Only Manager/Admin can confirm payment statuses
- Only Manager/Admin can mark Closed Won
- Only Manager/Admin can override ownership

8.3 Required Notes by Status

Some statuses must require notes.

Status	Notes Required?	Follow-Up Required?
No Answer	Optional	Optional
Callback Scheduled	Yes	Yes
Interested	Yes	Recommended
Meeting Booked	Yes	Yes
Not Interested	Yes	No
Do Not Contact	Yes	No
Wrong Number	Yes	No
Proposal Requested	Yes	Yes
Closed Lost	Yes	No

9. Call Logging System

Every outreach action must create a log.

9.1 Required Call Log Fields

Each call log must include:

- Log ID
- Lead ID
- Caller ID
- Date and time
- Channel used

- Outcome
- Notes
- Follow-up date if needed
- Next action
- Proof attachment if available
- Duration if available
- Created automatically by system
- Edited flag if edited
- Edit history if edits are allowed

9.2 Outreach Channels

Allowed channels:

- Phone
- WhatsApp
- Instagram
- Facebook
- Messenger
- Email
- Other approved channel

9.3 Good Notes Enforcement

The CRM should discourage useless notes.

Bad notes examples:

- "Called"
- "Ok"
- "Interested"
- "Later"
- "Maybe"

The system should warn:

"Please add useful details: who answered, what they said, next action, and timing."

9.4 Notes Template

For serious statuses, the CRM should show a note template:

Who answered:
Decision maker reached? Yes/No:
Current website? Yes/No/Unknown:
Client need:

Objection:
Next action:
Best follow-up time:
Proof added? Yes/No:

10. Follow-Up System

Follow-up is critical for closing deals.

10.1 Follow-Up Calendar

The CRM must include:

- My callbacks today
- Overdue follow-ups
- Upcoming follow-ups
- Hot leads
- Missed follow-ups
- Follow-up completion rate

10.2 Required Follow-Up Fields

When follow-up is set:

- Follow-up date
- Follow-up time
- Follow-up channel
- Follow-up reason
- Reminder notification
- Assigned user

10.3 Overdue Follow-Up Rules

If follow-up is missed:

- Mark as overdue
- Notify caller
- Notify supervisor after defined delay
- Notify manager for hot deals
- Count against caller performance

10.4 Inactivity Alert

If an owned interested lead has no activity for 7 days:

- Notify caller

If no activity for 14 days:

- Flag for reassignment review
-

11. Deal Pipeline Updates

The CRM must create a deal when a lead becomes serious.

11.1 Deal Creation Triggers

A deal may be created automatically when status becomes:

- Interested
- Decision Maker Reached
- Meeting Booked
- Proposal Requested
- Proposal Sent

Admin can configure exact triggers.

11.2 Deal Fields

Each deal must include:

- Deal ID
- Lead ID
- Business name
- Caller owner
- Closer assigned
- Manager responsible
- Package type
- Estimated deal value
- Approved deal value
- Commission rate
- Commission amount
- Deposit expected
- Deposit paid
- Final payment expected

- Final payment paid
- Payment status
- Project scope status
- Proposal status
- Deal stage
- Close probability
- Loss reason
- Created at
- Updated at

11.3 Deal Stages

Required deal stages:

- New Opportunity
- Qualification
- Meeting Booked
- Needs Audit
- Proposal Requested
- Proposal Sent
- Negotiation
- Waiting Deposit
- Deposit Paid
- In Production
- Waiting Final Payment
- Closed Won
- Closed Lost
- Refunded / Disputed

11.4 Deal Stage Permissions

Caller can move deal to:

- Interested
- Meeting Booked
- Proposal Requested

Closer can move deal to:

- Qualification
- Proposal Sent
- Negotiation
- Waiting Deposit

Manager/Admin can move deal to:

- Deposit Paid

- In Production
 - Waiting Final Payment
 - Closed Won
 - Closed Lost
 - Refunded / Disputed
-

12. Proposal and Scope System

The CRM must prevent callers from promising vague or unlimited work.

12.1 Proposal Fields

Proposal must include:

- Client name
- Business name
- Package selected
- Price
- Payment plan
- Included pages
- Included sections
- Included features
- Delivery estimate
- Revision rounds
- Bug-fix period
- Excluded features
- Extra work pricing note
- Approved by Manager
- Sent date

12.2 Scope Approval

Before client payment is accepted, Manager should approve:

- Final project price
- Exact features
- Delivery estimate
- Payment plan
- Commission rate
- Caller ownership

12.3 Scope Lock

After deposit is paid, project scope must be locked.

Any extra requested feature must be marked as:

- Change request
 - Paid extra
 - Free exception approved by Manager
 - Rejected
-

13. Payment Tracking System

Payment tracking is essential because commission depends on received money.

13.1 Payment Fields

Each payment record must include:

- Payment ID
- Deal ID
- Client name
- Amount expected
- Amount received
- Payment type: deposit / milestone / final / extra
- Payment method
- Payment date
- Confirmed by
- Proof attachment
- Notes
- Refund status if any

13.2 Payment Statuses

Required payment statuses:

- No Payment
- Waiting Deposit
- Deposit Partially Paid
- Deposit Paid
- Milestone Payment Paid
- Waiting Final Payment
- Final Payment Paid
- Fully Paid
- Refunded
- Disputed

13.3 Payment Confirmation Permissions

Only Admin or Manager can confirm payment.

Callers cannot confirm payments.

Closers cannot confirm payments unless explicitly allowed.

13.4 Payment Proof

CRM should support uploading:

- Screenshot
 - Receipt
 - Bank transfer proof
 - BaridiMob proof
 - CCP proof
 - Cash payment note
 - Other proof
-

14. Commission Tracking System

The CRM must have a dedicated commission module.

14.1 Commission Fields

Each commission record must include:

- Commission ID
- Caller ID
- Caller name
- Deal ID
- Lead ID
- Client/business name
- Commission rate
- Payment amount received
- Commission amount
- Commission stage
- Due date
- Paid date
- Payment method to caller
- Proof of commission payment
- Approved by
- Notes

- Dispute status if any

14.2 Commission Statuses

Required statuses:

- Not Eligible
- Pending Payment
- Eligible
- Pending Approval
- Approved
- Paid
- Delayed
- Cancelled
- Disputed
- Split Commission

14.3 Commission Calculation

Formula:

Commission Amount = Confirmed Client Payment × Commission Rate

Example:

Confirmed Client Payment = 40,000 DZD
Commission Rate = 20%
Commission Amount = 8,000 DZD

14.4 Commission Payment by Milestone

If client pays in parts, commission must also be generated in parts.

Example:

- Deposit paid: commission generated
- Final payment paid: second commission generated
- Extra feature paid: commission generated only if caller is eligible

14.5 Commission Dashboard for Callers

Callers should see:

- Total pending commission

- Total paid commission
- Deals that generated commission
- Client payment amount used for calculation
- Commission percentage
- Commission status
- Expected payout date
- Paid date

Callers should not see unnecessary private business data.

14.6 Commission Override

Admin/Manager can adjust commission rate only with reason.

CRM must log:

- Old rate
 - New rate
 - Reason
 - Changed by
 - Date/time
-

15. Dispute System

The CRM must support disputes formally.

15.1 Dispute Types

Dispute types:

- Lead ownership dispute
- Commission amount dispute
- Payment status dispute
- Duplicate lead dispute
- Caller behavior dispute
- Lead theft suspicion
- Client complaint
- Scope promise dispute

15.2 Opening a Dispute

A caller can open a dispute only on their own lead/deal/commission.

Required fields:

- Dispute type
- Lead/deal involved
- Explanation
- Proof attachments
- Requested resolution

15.3 Dispute Review Panel

Admin/Manager must see:

- Lead timeline
- Caller logs
- Ownership history
- Deal history
- Payment records
- Commission records
- Proof attachments
- Messages/notes
- Audit log

15.4 Dispute Statuses

Required statuses:

- Open
- Under Review
- Waiting for Proof
- Accepted
- Rejected
- Split Decision
- Resolved
- Closed

15.5 Dispute Decision Record

Final decision must include:

- Decision
 - Reason
 - Manager/Admin name
 - Date/time
 - Commission action if any
 - Lead ownership action if any
-

16. Do Not Contact System

The CRM must include a strict Do Not Contact system.

16.1 DNC Trigger

If a lead asks not to be contacted again, caller must mark:

Do Not Contact

16.2 DNC Fields

Required fields:

- Lead ID
- Phone/email/social blocked
- Reason
- Date
- Caller who marked DNC
- Notes
- Channel where request happened

16.3 DNC Enforcement

If a lead is marked Do Not Contact:

- Caller cannot call
- Caller cannot open WhatsApp outreach
- Caller cannot send email
- Caller sees warning
- Admin override required for any contact

16.4 DNC Warnings

If a caller attempts to contact DNC lead:

- Show blocking message
 - Log attempted action
 - Notify Admin if repeated
-

17. Client Communication System

17.1 Approved Script Library

CRM must include scripts based on outreach angle.

Angles:

- No website
- Bad website
- Good social media but no website
- High Google rating
- Low Google rating
- Active travel offers
- Visa/immigration agency
- Hajj/Omra agency
- General agency visibility
- Website speed/audit angle

17.2 Script Variables

Scripts should auto-fill:

- Business name
- City
- Google rating
- Social media platform
- Website status
- Caller name
- WEB-OS demo link
- Manager contact
- Offer angle

17.3 Caller Cannot Edit Core Claims

Callers may personalize simple words, but they should not edit:

- Price promises
- Delivery promises
- Guarantee claims
- Maintenance claims
- Feature promises

17.4 Message Logging

When caller opens WhatsApp/Instagram/email from dashboard, the CRM should log:

- Channel opened
 - Time
 - Lead
 - Caller
 - Script selected
 - Message copied
 - Outcome later required
-

18. Official Client Confirmation Flow

When a lead becomes serious, WEB-OS should contact the client officially.

18.1 Official Confirmation Message

CRM should allow Manager to send or copy an official confirmation message:

Salam, this is Hamid from WEB-OS. Thank you for your interest. To keep everything clear, all prices, payment details, and project scope are confirmed only through WEB-OS management. Our team member helped schedule this call, and I will personally confirm the final details with you.

18.2 Purpose

This prevents:

- Caller collecting money privately
 - Caller promising unauthorized features
 - Client confusion
 - Lead theft
 - Side deals
-

19. Project Delivery Module

The CRM must not stop at closing.

It should track delivery.

19.1 Project Creation

When deposit is paid, CRM creates a project.

Project fields:

- Project ID
- Deal ID
- Client name
- Package
- Approved scope
- Assigned developer
- Start date
- Expected delivery date
- Current stage
- Client content status
- Preview link
- Revision count
- Final delivery status
- Final payment status

19.2 Project Stages

Required project stages:

- Waiting Deposit
- Deposit Paid
- Waiting Client Content
- Content Received
- Design Started
- Development Started
- First Preview Ready
- Revision Round 1
- Revision Round 2
- Final Approval
- Waiting Final Payment
- Delivered
- Archived

19.3 Client Content Checklist

CRM must track whether client provided:

- Logo
- Agency name
- Phone number

- WhatsApp number
- Email
- Address
- Google Maps link
- Social links
- Offers/trips
- Services
- Images
- Text content
- Brand colors if available

19.4 Revision Tracking

Revision fields:

- Revision number
- Requested by client
- Date requested
- Description
- Included in scope? Yes/No
- Extra paid work? Yes/No
- Approved by Manager
- Completed date

19.5 Extra Feature Requests

Any new feature outside the original agreement must become a change request.

Change request fields:

- Request title
- Description
- Requested by client
- Price
- Approved by client?
- Paid?
- Added to project?
- Assigned developer
- Status

20. Packages and Pricing Module

The CRM should include package templates.

20.1 Package Templates

Default packages:

Starter

Price:

- 20,000 DZD to 30,000 DZD

Includes:

- One-page website
- Mobile responsive
- Agency intro
- Offers/services section
- WhatsApp button
- Google Maps
- Contact section

Excludes:

- Admin panel
- Booking system
- Payment system
- Unlimited revisions
- Free maintenance
- Advanced backend

Professional

Price:

- 45,000 DZD to 70,000 DZD

Includes:

- Homepage
- About page/section
- Offers/trips page
- Visa/services page if needed
- Contact page
- WhatsApp buttons
- Google Maps
- Social links
- Google reviews section if possible
- Basic SEO
- Better design

Premium

Price:

- 80,000 DZD to 100,000 DZD+

Includes:

- Everything in Professional
- Custom premium design
- More sections/pages
- Admin/editable content if agreed
- Advanced features if approved
- Analytics setup if agreed
- Speed optimization

20.2 Package Selection in Deal

When creating proposal, Manager should select:

- Package
- Custom price
- Included features
- Excluded features
- Payment plan
- Revision count
- Bug-fix period
- Delivery estimate

21. Analytics and Performance Dashboards

The CRM must include dashboards for different roles.

21.1 Admin Dashboard

Admin should see:

- Total leads
- Leads by source
- Leads by city/wilaya
- Leads by status
- Active callers
- Calls today
- Conversations today

- Interested leads
 - Meetings booked
 - Deals created
 - Deposits paid
 - Revenue received
 - Commission pending
 - Commission paid
 - Suspicious activity alerts
 - DNC count
 - Disputes open
 - Projects in production
 - Overdue follow-ups
-

21.2 Manager Dashboard

Manager should see:

- Hot leads
 - Meetings today
 - Proposals pending
 - Waiting deposit deals
 - Deals needing price approval
 - Caller performance
 - Overdue follow-ups
 - Open disputes
 - Projects waiting client content
 - Projects waiting final payment
 - Commission approvals needed
-

21.3 Caller Dashboard

Caller should see:

- Get next lead button
- Current lead card
- Today's call target
- Calls made today
- Real conversations today
- Follow-ups today
- Overdue follow-ups
- Interested leads brought
- Meetings booked
- My pending commissions
- My paid commissions

- My lead ownership list
- Agreement status
- Warnings or announcements

Caller should not see:

- Full master database
 - Other callers' leads
 - Admin analytics
 - Full revenue data outside their deals
 - Export buttons
-

21.4 Closer Dashboard

Closer should see:

- Assigned deals
 - Meeting schedule
 - Client notes
 - Proposal status
 - Waiting deposit deals
 - Negotiation stage deals
 - Follow-ups
 - Price/scope approval requests
 - Closed/won summary
-

21.5 Developer Dashboard

Developer should see:

- Assigned projects
- Approved project scope
- Client content checklist
- Project stage
- Delivery deadline
- Revision requests
- Preview link field
- Extra feature requests
- Final handover status

Developer should not see unnecessary lead database or caller commissions.

22. Notifications System

The CRM must include notifications.

22.1 Caller Notifications

Notify caller when:

- New leads assigned
- Follow-up due
- Follow-up overdue
- Lead ownership close to expiry
- Meeting scheduled
- Commission becomes pending
- Commission approved
- Commission paid
- Dispute response received
- Agreement update required

22.2 Manager Notifications

Notify Manager when:

- New interested lead
- Meeting booked
- Proposal requested
- Waiting deposit
- Deposit confirmed
- Suspicious caller activity
- Dispute opened
- DNC violation attempted
- Follow-up overdue on hot lead
- Project delayed

22.3 Admin Notifications

Notify Admin when:

- Suspicious activity detected
- Export attempted
- Caller account freeze
- Trap lead touched
- Dispute escalated
- Payment marked
- Commission override
- Agreement acceptance failed

- Security event
-

23. Audit Log System

Audit logs must be immutable.

23.1 Events to Log

Log all important events:

- Login
- Failed login
- Lead viewed
- Phone copied
- WhatsApp opened
- Instagram opened
- Email opened
- Status changed
- Notes added
- Notes edited
- Lead assigned
- Lead reassigned
- Ownership created
- Ownership changed
- Deal created
- Deal value changed
- Proposal sent
- Payment confirmed
- Commission calculated
- Commission approved
- Commission paid
- Dispute opened
- Dispute resolved
- User disabled
- Export attempted
- Trap lead viewed
- DNC attempted contact

23.2 Audit Log Fields

Each audit log must include:

- Event ID
- User ID
- User role

- Action
- Entity type
- Entity ID
- Old value
- New value
- Timestamp
- IP/device if available
- Severity level
- Notes

23.3 Severity Levels

Severity levels:

- Info
 - Warning
 - Suspicious
 - Critical
-

24. Data Model Additions

This section lists important tables or collections.

24.1 Users Table

Fields:

- user_id
- full_name
- phone
- email
- role
- status
- trust_level
- created_at
- approved_by
- agreement_version_accepted
- last_login
- disabled_reason

24.2 Leads Table

Fields:

- lead_id
- business_name
- niche
- city
- wilaya
- phone
- whatsapp
- instagram
- facebook
- email
- website_url
- google_maps_url
- google_rating
- google_reviews_count
- has_website
- website_quality_score
- social_activity_score
- source
- assigned_caller_id
- owner_caller_id
- ownership_status
- status
- priority_score
- do_not_contact
- last_contact_at
- next_follow_up_at
- created_at
- updated_at

24.3 Lead Locks Table

Fields:

- lock_id
- lead_id
- lock_type
- locked_by
- lock_start
- lock_expiry
- status

24.4 Call Logs Table

Fields:

- call_log_id
- lead_id
- caller_id
- channel
- outcome
- notes
- follow_up_at
- proof_url
- created_at
- edited_at
- edit_history

24.5 Deals Table

Fields:

- deal_id
- lead_id
- owner_caller_id
- closer_id
- manager_id
- package_type
- estimated_value
- approved_value
- commission_rate
- deal_stage
- payment_status
- project_status
- proposal_url
- scope_locked
- created_at
- updated_at
- closed_at

24.6 Payments Table

Fields:

- payment_id
- deal_id
- amount_expected
- amount_received
- payment_type

- payment_method
- confirmed_by
- proof_url
- status
- paid_at
- created_at

24.7 Commissions Table

Fields:

- commission_id
- caller_id
- deal_id
- payment_id
- commission_rate
- payment_amount
- commission_amount
- status
- approved_by
- paid_by
- paid_at
- proof_url
- dispute_id

24.8 Projects Table

Fields:

- project_id
- deal_id
- assigned_developer_id
- package_type
- approved_scope
- client_content_status
- current_stage
- preview_url
- start_date
- expected_delivery_date
- delivered_at
- final_payment_status

24.9 Disputes Table

Fields:

- dispute_id

- opened_by
- dispute_type
- lead_id
- deal_id
- commission_id
- explanation
- proof_url
- status
- decision
- decided_by
- decided_at

24.10 Audit Logs Table

Fields:

- audit_id
- user_id
- action
- entity_type
- entity_id
- old_value
- new_value
- severity
- created_at
- ip_address
- device_info

24.11 Trap Leads Table

Fields:

- trap_lead_id
- lead_id
- assigned_to
- trap_type
- expected_behavior
- triggered
- triggered_by
- triggered_at
- notes

25. Import System Updates

Lead import must be controlled.

25.1 Import Fields

CSV/import should support:

- Business name
- Phone
- WhatsApp
- Instagram
- Facebook
- Email
- City
- Wilaya
- Google Maps URL
- Google rating
- Review count
- Website URL
- Source
- Notes
- Tags

25.2 Duplicate Detection

Before importing, CRM must detect duplicates by:

- Phone number
- Business name
- Google Maps URL
- Instagram URL
- Facebook URL
- Email
- Website URL

25.3 Duplicate Handling

Options:

- Skip duplicate
 - Merge data
 - Update existing lead
 - Keep as separate only with Admin approval
-

26. Search and Filtering

Admin and Manager search must support:

- Business name
- Phone
- City/wilaya
- Status
- Caller
- Owner
- Source
- Package interest
- Payment status
- Deal stage
- Follow-up date
- DNC status
- Duplicate status
- Suspicious flag

Caller search should be limited to:

- Their own assigned leads
- Their own follow-ups
- Their own owned leads

27. API and Security Rules

27.1 Backend Must Enforce Permissions

Do not rely only on frontend hiding buttons.

Backend must enforce:

- Role permissions
- Lead visibility
- Export restrictions
- Status change permissions
- Payment confirmation permissions
- Commission edit permissions

27.2 No Full Lead Payload for Callers

When caller requests “next lead,” backend must return only one lead.

Do not send the full lead list to browser and hide it in UI.

27.3 Rate Limiting

Rate limit:

- Login attempts
- Lead view requests
- Copy phone actions
- Social link opens
- Search requests
- API calls

27.4 Session Security

Include:

- Secure login
- Session expiry
- Optional 2FA later
- Force logout disabled users
- Password reset
- Activity-based session timeout

27.5 LocalStorage Warning

Avoid storing full lead data in localStorage.

If offline mode is used, store only:

- Temporary unsynced action
- Lead ID
- Minimal note draft
- Timestamp

Do not store full phone lists or complete lead records in localStorage.

28. Offline Mode Changes

The original system includes offline mode.

This must be limited for security.

28.1 Offline Allowed

Offline mode may allow:

- Save temporary note draft
- Save unsynced status for current lead
- Save unsynced call log for current lead

28.2 Offline Not Allowed

Offline mode must not allow:

- Downloading many leads
- Viewing new leads offline
- Exporting cached leads
- Keeping full lead database in browser storage

28.3 Sync Conflict Handling

If user logs offline and another user updated the lead, CRM must:

- Show conflict
 - Preserve both logs
 - Ask Manager/Admin to resolve if serious
-

29. AI Features to Add Later

AI is useful but should not replace business controls.

29.1 AI Script Assistant

AI can generate:

- Call script
- WhatsApp message
- Email draft
- Follow-up message
- Objection handling
- Summary of call notes

29.2 AI Lead Scoring

AI can score leads based on:

- No website
- Bad website
- Active social media
- High Google rating
- Many reviews
- Good niche fit
- City quality
- Recent activity

29.3 AI Call Note Cleanup

AI can turn messy notes into structured notes.

Original:

owner said send demo maybe later

Cleaned:

Spoke with owner. They asked to receive the demo first and may discuss later.
Follow-up required tomorrow.

29.4 AI Risk Warning

AI can detect dangerous caller notes:

- "I promised free maintenance"
- "I told him everything included"
- "I gave price 20k for admin dashboard"
- "Client will send money to me"

The system should flag these for Manager review.

30. Client Agreement Support

The CRM should eventually generate a simple client agreement or project summary.

30.1 Client Project Summary

Before payment, CRM can generate:

- Client name
- Business name
- Package
- Price
- Payment plan
- Included features
- Excluded features
- Delivery estimate
- Revision count
- Bug-fix period
- Extra work rule

30.2 Client Acceptance

Client can approve by:

- WhatsApp confirmation
- Email confirmation
- Signed PDF
- Form acceptance

CRM should upload proof.

31. Minimum MVP Version

Do not build everything first.

The first MVP should include only the critical parts.

31.1 MVP Must Have

- Login
- Roles: Admin, Manager, Caller
- Lead import
- Lead assignment
- One-lead-at-a-time caller dialer
- 10-minute active call lock
- Call logging
- Follow-up dates
- Lead statuses

- Interested lead ownership
- Deal creation
- Payment tracking
- Commission tracking
- Caller agreement acceptance
- Audit logs
- No caller export
- Caller dashboard
- Admin dashboard

31.2 MVP Can Wait

These can be added later:

- Full SSE real-time broker
 - Advanced AI
 - Offline mode
 - Developer dashboard
 - Client portal
 - Automatic proposal generator
 - Advanced analytics
 - Trap lead automation
 - 2FA
 - Full dispute workflow
-

32. Suggested Build Priority

Phase 1: Business Control

Build first:

- Agreement acceptance
- Lead ownership
- Commission tracking
- Payment tracking
- Role permissions
- Audit logs

Phase 2: Caller Productivity

Build next:

- One-lead dialer
- Script engine

- Follow-up system
- Call notes templates
- Lead statuses
- Dashboard metrics

Phase 3: Security

Build next:

- Anti-export controls
- Lead view logs
- Rate limits
- Suspicious activity alerts
- Trap leads
- Watermarks

Phase 4: Closing and Delivery

Build next:

- Deals pipeline
- Proposal/scope module
- Project delivery tracking
- Revision tracking
- Extra feature requests

Phase 5: Automation and AI

Build last:

- AI scripts
- AI lead scoring
- AI note cleanup
- AI risk detection
- Advanced reporting

33. UI Changes Required

33.1 Caller Lead Card

Caller should see:

- Business name
- City

- Phone button
- WhatsApp button
- Instagram button
- Website if available
- Google rating
- Lead angle suggestion
- Script selector
- Outcome buttons
- Notes field
- Follow-up date/time
- Proof upload
- Save and next button

Caller should not see:

- Full lead list
- Export button
- Other callers
- Full database count
- Admin tags not needed

33.2 Caller Money Page

Caller should see:

- My closed deals
- My pending commissions
- My paid commissions
- Commission rate per deal
- Payment received by WEB-OS
- Commission amount
- Commission status
- Payout date

33.3 Admin Lead Page

Admin should see:

- Full lead details
- Assignment history
- Ownership history
- Call history
- Deal history
- Payment history
- Commission history
- Audit logs
- Suspicious activity flags

33.4 Manager Deal Page

Manager should see:

- Client details
 - Caller owner
 - Notes
 - Package
 - Price
 - Scope
 - Payment plan
 - Proposal status
 - Deposit status
 - Commission calculation
 - Project handoff button
-

34. Business Rules Validation

The CRM should block invalid actions.

Examples:

34.1 Caller Tries to Mark Closed Won

Block:

Only Manager or Admin can mark a deal as Closed Won after payment confirmation.

34.2 Caller Tries to Open Too Many Leads

Block:

Daily lead view limit reached. Contact your supervisor if you need more leads.

34.3 Caller Tries to Contact DNC Lead

Block:

This lead is marked Do Not Contact. Outreach is disabled.

34.4 Caller Leaves Notes Empty for Interested Lead

Block:

Interested leads require detailed notes before saving.

34.5 Manager Tries to Change Commission Rate

Require reason:

Please provide a reason for commission rate change.

34.6 Payment Confirmed

Automatically:

- Create commission record
 - Notify caller
 - Update deal payment status
 - Add audit log
-

35. Final Acceptance Criteria

The CRM upgrade is acceptable only if the following conditions are met.

35.1 Caller Protection

- Caller lead ownership is tracked
- Caller commission is visible
- Caller can open disputes
- Caller can see payment-based commission status
- Caller agreement acceptance is saved

35.2 WEB-OS Protection

- Callers cannot export leads
- Callers cannot view full database
- Caller access is logged
- Suspicious behavior is flagged
- Trap leads can be used
- Payments go through WEB-OS

- Unauthorized promises are reduced

35.3 Manager Control

- Manager controls final price
- Manager controls scope
- Manager confirms payment
- Manager approves commission
- Manager sees hot leads and follow-ups
- Manager can resolve disputes

35.4 Sales Process

- Interested leads become deals
- Deals track pipeline stage
- Payments are tracked
- Commission is generated correctly
- Closed won requires payment
- Lost reasons are recorded

35.5 Delivery Process

- Deposit creates project
- Project scope is locked
- Client content is tracked
- Revisions are tracked
- Extra features become paid change requests
- Final payment is required before final handover

36. Final Product Vision

The WEB-OS CRM should not be only a cold calling dashboard.

It should become a full small sales operating system for WEB-OS.

The system must handle:

- Lead sourcing
- Caller work
- Lead protection
- Client interest
- Sales closing
- Payment confirmation
- Commission calculation
- Project delivery

- Dispute resolution
- Security and audit history

The goal is to make the business scalable without losing control.

A good caller should trust the system because their commission is protected.

WEB-OS should trust the system because leads, money, and client communication are controlled.

The client should trust WEB-OS because pricing, scope, and delivery are clear.

37. Summary of Most Important Edits

The most important edits are:

1. Add caller agreement acceptance before dashboard access.
 2. Add one-lead-at-a-time dialer.
 3. Add active call lock and ownership lock separately.
 4. Add lead ownership protection for 60 days.
 5. Add inactivity expiration after 14 days.
 6. Add commission module.
 7. Add payment tracking module.
 8. Add deal pipeline with payment-based closing.
 9. Add no-export caller permissions.
 10. Add lead view logs and suspicious activity detection.
 11. Add trap leads.
 12. Add watermarking.
 13. Add do-not-contact enforcement.
 14. Add dispute system.
 15. Add project delivery tracking.
 16. Add scope locking.
 17. Add extra feature/change request tracking.
 18. Add role-based dashboards.
 19. Add audit logs for all important actions.
 20. Make the CRM protect both WEB-OS and callers.
-
