

WEB-OS Caller Guidelines & Commission Agreement

Document Version: 1.0

Business Name: WEB-OS

Activity: Cold outreach and client acquisition for website development services

Target Market: Travel agencies and related businesses in Algeria

Caller Role: Commission-based outreach caller / appointment setter

Manager: Hamid / WEB-OS Management

1. Purpose of This Document

This document explains how callers work with WEB-OS, how leads are handled, how commissions are calculated, how payments work, how the dashboard must be used, and what is allowed or not allowed.

The goal is to keep the system fair, transparent, and professional for everyone:

- The caller
- WEB-OS
- The client
- The development team

No caller should work based on unclear promises. Every serious lead, client payment, and commission must be tracked inside the WEB-OS dashboard.

2. WEB-OS Business Overview

WEB-OS sells websites and digital solutions mainly to Algerian travel agencies.

The main offer is to help travel agencies get a more professional online presence, build trust with clients, show their offers clearly, and receive direct inquiries through WhatsApp, phone, social media, or contact forms.

WEB-OS websites may include, depending on the package:

- Landing page
- Professional travel agency website
- Mobile responsive design
- WhatsApp contact buttons
- Services and offers sections

- Google Maps integration
 - Google reviews section
 - Contact forms
 - Basic SEO
 - Admin/editable content for higher packages
 - Custom features if agreed clearly before payment
-

3. Caller Role

The caller's main job is to contact potential clients, create interest, qualify the client, and bring serious opportunities to WEB-OS.

At the beginning, callers are not expected to close full deals alone unless WEB-OS management gives them permission.

The caller's main responsibilities are:

- Contact assigned leads
 - Call businesses professionally
 - Explain the basic WEB-OS offer
 - Identify interested prospects
 - Ask simple qualification questions
 - Book meetings or calls with the manager
 - Log every call and outcome in the dashboard
 - Follow up with leads when needed
 - Respect WEB-OS rules and client privacy
 - Never make promises that were not approved by WEB-OS
-

4. Caller Is Not Allowed to Act as Full Manager

Unless WEB-OS gives written permission, the caller must not:

- Decide final prices alone
- Promise exact delivery dates alone
- Promise advanced features alone
- Offer discounts without approval
- Collect client money personally
- Sign agreements with clients
- Give final project scope alone
- Promise guaranteed business results
- Promise unlimited revisions
- Promise free maintenance
- Promise free future features

The caller may explain the general offer, but final pricing, project scope, payment terms, and delivery confirmation must be approved by WEB-OS management.

5. WEB-OS Packages and Price Range

WEB-OS websites generally start from **20,000 DZD** and can reach **100,000 DZD or more**, depending on quality, complexity, features, number of pages, and client requirements.

5.1 Starter Package

Price Range: 20,000 DZD to 30,000 DZD

Usually includes:

- One-page website
- Mobile responsive design
- Agency introduction
- Services or offers section
- WhatsApp button
- Google Maps
- Contact section
- Basic design
- Basic launch setup

This package is for simple websites only.

It does not include:

- Admin dashboard
- Booking system
- Payment system
- Mobile application
- Complex backend
- Unlimited pages
- Unlimited revisions
- Advanced custom features

5.2 Professional Package

Price Range: 45,000 DZD to 70,000 DZD

Usually includes:

- Homepage

- About section or page
- Offers or trips section
- Visa/services section if needed
- Contact page
- WhatsApp reservation buttons
- Google Maps
- Social media links
- Google reviews section if possible
- Mobile optimization
- Basic SEO
- Better design quality

This is the main package WEB-OS aims to sell to serious agencies.

5.3 Premium Package

Price Range: 80,000 DZD to 100,000 DZD+

Usually includes:

- Everything in the Professional Package
- More custom design
- More pages or sections
- Advanced layout
- Admin/editable content if agreed
- More complex features
- Analytics setup if agreed
- Speed optimization
- More premium user experience

Premium projects must be approved carefully before giving a final price.

6. No Free Maintenance Rule

WEB-OS does not automatically offer free long-term maintenance.

After the project is delivered, new changes, new pages, new sections, new features, new integrations, redesigns, or extra work are paid separately unless they were clearly included in the original agreement.

The project includes only what is written and agreed before payment.

6.1 Bug Fix Period

WEB-OS may offer a short bug-fix period after delivery, usually 7 to 14 days.

This means:

- If something included in the original agreement is broken, WEB-OS fixes it.
 - If the client asks for something new, it is not a bug fix.
 - If the client changes their mind, it is not a bug fix.
 - If the client wants extra features, it is paid separately.
-

7. Client Payment Flow

WEB-OS does not start serious production work without client payment.

Client payment is usually divided into stages.

7.1 Small Projects

For projects between 20,000 DZD and 30,000 DZD:

- 50% before starting
- 50% before final delivery or launch

7.2 Medium and Large Projects

For projects from 45,000 DZD to 100,000 DZD+:

- 40% before starting
- 30% after first version or preview
- 30% before final delivery, launch, handover, or full access

7.3 Important Payment Rule

The client must pay before receiving final access, full files, full handover, or full launch control.

WEB-OS may show previews before final payment, but final delivery happens only after payment is completed.

8. Caller Commission System

Callers are paid by commission.

Commission is calculated only from money actually received by WEB-OS from the client.

A promise from the client is not payment.

A meeting is not payment.

An interested lead is not payment.

A verbal agreement is not payment.

Commission becomes valid only when the client pays WEB-OS.

9. Standard Commission Rates

The standard commission structure is:

9.1 Basic Caller Commission

A caller receives **20%** of the money received from a client if:

- The caller brought the lead
- The lead was registered correctly in the dashboard
- The caller followed the correct process
- The client paid WEB-OS
- The caller did not make false promises
- The deal was not disputed or cancelled

9.2 Bonus Commission

The caller may receive more than 20% in special cases.

Possible bonus structure:

- **20%** for bringing a valid paying client
- **25%** if the caller brings a qualified client, books a serious meeting, follows up properly, and helps the deal move forward
- **30%** only if the caller brings the client, follows the full process, helps close the deal, and the final price/scope was approved by WEB-OS

The maximum commission is usually **30%**, unless WEB-OS management decides otherwise in writing.

9.3 Commission Is Not Guaranteed at 30%

The 30% commission is not automatic for every lead.

30% is reserved for high-quality work, serious follow-up, and successful closing support.

A caller who only calls once and says “the client is interested” does not automatically receive 30%.

10. Commission Examples

Example 1: 20% Commission

Project price: 50,000 DZD
Client pays full amount: 50,000 DZD
Caller commission rate: 20%

Caller receives:

$$50,000 \text{ DZD} \times 20\% = \mathbf{10,000 \text{ DZD}}$$

Example 2: 30% Commission

Project price: 80,000 DZD
Client pays full amount: 80,000 DZD
Caller commission rate: 30%

Caller receives:

$$80,000 \text{ DZD} \times 30\% = \mathbf{24,000 \text{ DZD}}$$

Example 3: Payment in Two Parts

Project price: 100,000 DZD
Client pays first deposit: 40,000 DZD
Caller commission rate: 20%

First commission payment:

$$40,000 \text{ DZD} \times 20\% = \mathbf{8,000 \text{ DZD}}$$

Client later pays remaining 60,000 DZD.

Second commission payment:

$$60,000 \text{ DZD} \times 20\% = \mathbf{12,000 \text{ DZD}}$$

Total caller commission:

$$8,000 \text{ DZD} + 12,000 \text{ DZD} = \mathbf{20,000 \text{ DZD}}$$

Example 4: Client Does Not Pay Final Amount

Project price: 80,000 DZD

Client pays deposit only: 40,000 DZD

Caller commission rate: 20%

Caller receives commission only on the 40,000 DZD received.

$40,000 \text{ DZD} \times 20\% = \mathbf{8,000 \text{ DZD}}$

If the client never pays the remaining amount, the caller does not receive commission on money WEB-OS did not receive.

11. Commission Payment Timing

Commission is paid only after WEB-OS confirms client payment.

Recommended payout timing:

- Commission becomes pending after client payment is confirmed
 - Commission is paid within 48 hours when possible
 - For larger deals, commission may be paid according to client payment stages
 - If there is a refund, cancellation, chargeback, or serious dispute, commission may be delayed until the situation is resolved
-

12. Lead Ownership

Lead ownership means the caller is recognized as the person who brought the client opportunity.

A caller owns a lead only when the lead is properly registered in the dashboard.

12.1 Valid Lead Ownership Requires

A lead is considered valid when it includes:

- Business name
- Phone number or social media link
- City or location if available
- Contact person if available
- Date and time of contact
- Call outcome
- Useful notes

- Proof if available
- Caller name/account
- Status update in the dashboard

12.2 Lead Ownership Protection

If a caller brings a lead and the lead later becomes a paying client, the caller keeps their commission even if the client later contacts WEB-OS directly.

The dashboard is the official proof.

If the dashboard shows that the caller brought the client first, the caller's commission is protected.

12.3 Ownership Duration

A valid lead is protected for the caller for **60 days**.

If the client pays within 60 days after the caller created a valid interested lead, the caller receives commission.

12.4 Inactivity Rule

If the caller does not follow up, update, or take action on the lead for **14 days**, WEB-OS may reassign the lead.

This is to prevent callers from blocking leads without working on them.

13. No Dashboard Record = No Guaranteed Commission

This is a strict rule.

If a caller claims they brought a client but the lead was not recorded in the dashboard, WEB-OS cannot guarantee commission.

The dashboard is the official source of truth.

Callers must always register serious leads immediately.

Screenshots, WhatsApp messages, Instagram messages, or call logs can help, but the lead must still be recorded in the dashboard.

14. Duplicate Leads

Sometimes two callers may contact the same business.

The duplicate lead rule is:

The first caller who registered a valid lead in the dashboard owns the lead.

However, WEB-OS may review the case if:

- The first caller did not follow up
- The first caller entered fake or weak information
- The first caller abandoned the lead
- Another caller revived the deal after inactivity
- Another caller actually helped close the client

In special cases, WEB-OS may split commission fairly.

Possible split examples:

- 70% of commission to the original lead owner
- 30% of commission to the caller who revived or helped close the deal

Or:

- 50% / 50% split if both contributed strongly

Final decision is made by WEB-OS management based on dashboard history and proof.

15. Dashboard Workflow

The dashboard must be used for every lead.

Callers must not work outside the dashboard.

15.1 Basic Workflow

1. Caller logs into the dashboard
2. Caller opens assigned dialer queue
3. Caller selects a lead
4. Lead becomes temporarily locked
5. Caller reviews lead details
6. Caller chooses the best outreach angle
7. Caller calls or messages the lead

8. Caller logs the outcome
 9. Caller adds notes
 10. Caller sets follow-up date if needed
 11. Lead status is updated
 12. If interested, a deal is created or moved to pipeline
 13. Management reviews serious leads
 14. Client payment is tracked
 15. Caller commission is calculated and paid
-

16. Lead Lock System

WEB-OS uses lead locks to prevent confusion and duplicate calling.

16.1 Active Call Lock

When a caller opens a lead to call, the lead is locked temporarily.

Default active lock duration:

10 minutes

During this time, other callers should not contact the same lead.

If the caller abandons the lead or loses connection, the lock expires automatically.

16.2 Ownership Lock

The active call lock is not the same as lead ownership.

Lead ownership is created only when:

- The caller contacts the lead
- The lead shows interest or progress
- The caller logs the outcome correctly
- The dashboard records the caller as lead owner

Ownership can last up to 60 days if the caller remains active.

17. Lead Statutes

Callers must select the correct status after every interaction.

Possible statuses:

- New
- Assigned
- Locked for Call
- Called - No Answer
- Wrong Number
- Not Interested
- Do Not Contact
- Needs Follow-Up
- Callback Scheduled
- Interested
- Decision Maker Reached
- Meeting Booked
- Proposal Sent
- Waiting Deposit
- Deposit Paid
- In Production
- Delivered
- Waiting Final Payment
- Closed Won
- Closed Lost
- Commission Pending
- Commission Paid
- Refunded / Disputed

17.1 Important Status Rule

Do not mark a lead as “Closed Won” unless the client has paid.

A client saying “yes” is not a closed deal.

A client saying “send me details” is not a closed deal.

A meeting booked is not a closed deal.

A deal is closed only when payment is received.

18. Call Notes Rules

Every call must include useful notes.

Bad notes:

- "Called"
- "Interested"
- "Maybe"
- "Good"
- "Later"

Good notes:

- "Spoke with owner. They do not have a website. Interested in a landing page. Asked for price. Callback tomorrow at 15:00."
- "Secretary answered. Owner not available. Best time to call: 10:00 tomorrow."
- "Agency has Instagram and Facebook. No website. Interested in WhatsApp booking page. Meeting booked with Hamid Friday 18:00."
- "Not interested. Said they already have a developer. Do not call again."

Good notes protect the caller and help WEB-OS close deals.

19. Proof Requirements

Callers should upload or attach proof when possible.

Acceptable proof includes:

- Screenshot of WhatsApp conversation
- Screenshot of Instagram conversation
- Screenshot of Facebook conversation
- Email reply
- Call log screenshot
- Meeting confirmation
- Voice note confirmation if allowed
- Written notes with clear time and details

Proof is especially important for commission disputes.

20. Caller Daily Work Expectations

Callers are expected to work seriously and consistently.

Daily expectations may include:

- Calling assigned leads

- Updating every lead status
- Writing clear notes
- Booking meetings
- Following up with callbacks
- Reporting serious opportunities
- Respecting scheduled callback times
- Keeping communication professional

WEB-OS may set daily targets depending on the campaign.

Example daily target:

- 30 to 50 call attempts per day
- 5 to 10 real conversations per day
- 1 to 3 serious interested leads per day if lead quality allows

Targets may change depending on lead quality, niche, and campaign results.

21. Qualification Questions

Callers should ask simple questions to understand if the lead is serious.

Useful questions:

- Do you currently have a website?
- Do most clients contact you through WhatsApp, Facebook, or Instagram?
- Do you publish offers or trips regularly?
- Are you interested in having a professional website where clients can see your offers and contact you directly?
- Who is responsible for decisions about your online presence?
- When would be a good time for a short call with our manager?
- Would you like us to send you a demo?

Callers should not overcomplicate the conversation.

The goal is to create interest and book the next step.

22. Approved Outreach Positioning

Callers should present WEB-OS in a professional way.

The basic message:

WEB-OS builds professional websites for Algerian travel agencies so their clients can see offers clearly, trust the agency, and contact them directly through WhatsApp or phone.

Callers may mention:

- Professional online presence
- Mobile-friendly website
- Direct WhatsApp contact
- Displaying travel offers
- More trust for clients
- Better agency image
- Google Maps and reviews
- Social media connection
- Fast and modern design

Callers must not say:

- "We guarantee you will get many clients"
- "You will become number one on Google"
- "The website will automatically bring sales"
- "Everything is included"
- "Unlimited changes"
- "Free maintenance forever"
- "We can build anything for 20,000 DZD"

23. Communication Channels

Callers may use approved channels such as:

- Phone calls
- WhatsApp
- Instagram
- Facebook
- Email

The main channel should be professional and respectful.

23.1 Messaging Rules

When sending messages:

- Do not spam
- Do not send repeated messages aggressively
- Do not use fake identity
- Do not insult the client's current website or social media

- Do not pressure the client
- Do not send misleading claims
- Stop messaging if the client asks to stop
- Keep messages short and relevant
- Use approved message templates when available

23.2 Email Rules

When sending emails:

- Do not expose multiple client emails in CC
 - Use individual emails when possible
 - Use BCC only if needed and approved
 - Keep the email professional
 - Include WEB-OS identity clearly
 - Do not use false claims or fake proof
-

24. Do Not Contact Rule

If a lead says they do not want to be contacted again, the caller must mark the lead as:

Do Not Contact

The caller must add the reason and date.

After this, the lead must not be called or messaged again unless WEB-OS management gives a clear reason.

Ignoring this rule may lead to removal from the team.

25. Professional Behavior Rules

Callers must:

- Be respectful
- Speak clearly
- Stay calm
- Represent WEB-OS professionally
- Be honest about the offer
- Respect client time
- Log all work in the dashboard
- Follow the approved process
- Protect client information

- Ask management when unsure

Callers must not:

- Lie to clients
 - Insult clients
 - Insult competitors
 - Use pressure or manipulation
 - Promise impossible results
 - Promise unapproved prices
 - Promise unapproved features
 - Hide leads from the dashboard
 - Steal leads
 - Share WEB-OS data
 - Work with WEB-OS clients privately
 - Contact closed clients outside the team process
 - Use the WEB-OS name for personal deals
-

26. Confidentiality

All leads, client information, phone numbers, emails, social media accounts, notes, scripts, dashboard access, and internal documents belong to WEB-OS.

Callers must not:

- Copy the database for personal use
- Sell the leads
- Share leads with outsiders
- Contact WEB-OS leads for another business
- Share dashboard screenshots publicly
- Share client private information
- Use WEB-OS scripts for another company without permission

Breaking confidentiality may result in immediate removal from the team and loss of unpaid commissions related to dishonest activity.

27. Client Data Handling

Callers must treat client data carefully.

Client data includes:

- Names

- Phone numbers
- Emails
- Social media accounts
- Business details
- Notes
- Conversations
- Payment information
- Project details

Callers should only use client data for WEB-OS outreach and sales work.

Callers must not save unnecessary private data outside the dashboard.

Callers must not share data outside the WEB-OS team.

28. Dispute System

A dispute can happen when there is disagreement about:

- Who owns a lead
- Whether a lead was valid
- Whether commission is owed
- Whether the client came from a caller
- Whether the caller followed the process
- Whether the commission percentage should be 20%, 25%, or 30%

28.1 How to Open a Dispute

The caller must contact WEB-OS management and provide:

- Lead name
- Date of contact
- Dashboard record
- Screenshots or proof if available
- Explanation of the issue

28.2 How WEB-OS Decides

WEB-OS will review:

- Dashboard activity history
- Call logs
- Lead ownership
- Notes
- Proof

- Payment records
- Timeline of events
- Caller behavior

28.3 Dispute Decision

Possible decisions:

- Commission approved
- Commission rejected
- Commission split between callers
- Commission delayed until payment confirmation
- Lead reassigned
- Caller warning
- Caller removal in serious cases

The dashboard history is the main source of truth.

29. Commission May Be Cancelled or Reduced

Commission may be cancelled, reduced, or delayed if:

- The client never pays
 - The client cancels before payment
 - The client requests a refund
 - The caller made false promises
 - The caller gave an unapproved price
 - The caller promised unapproved features
 - The caller did not log the lead
 - The caller faked activity
 - The caller stole or hid lead information
 - The caller contacted clients privately
 - The caller violated WEB-OS rules
 - The deal becomes disputed
 - The client payment is not confirmed
-

30. Caller Removal

WEB-OS may remove a caller from the team if the caller:

- Repeatedly ignores dashboard rules
- Lies to clients
- Fakes call logs

- Steals leads
- Shares confidential data
- Harasses clients
- Damages WEB-OS reputation
- Works privately with WEB-OS clients
- Makes unauthorized promises
- Refuses to follow the process
- Creates serious disputes repeatedly

If a caller is removed, WEB-OS will review any pending commissions.

Valid commissions from clean deals may still be paid.

Commissions related to dishonest, fake, or disputed activity may be cancelled.

31. WEB-OS Responsibilities

WEB-OS management is responsible for:

- Providing leads or lead access
- Providing dashboard access
- Providing approved scripts or outreach angles
- Reviewing serious leads
- Closing deals or approving closers
- Confirming payments
- Tracking commissions
- Paying valid commissions
- Handling disputes fairly
- Protecting caller ownership when properly recorded
- Giving feedback to callers
- Maintaining the dashboard system

WEB-OS must not secretly remove a caller's ownership from a valid lead without reason.

WEB-OS must not hide confirmed client payments from callers.

WEB-OS must keep the system transparent and fair.

32. Caller Responsibilities

The caller is responsible for:

- Working honestly

- Contacting assigned leads
 - Logging every call
 - Writing useful notes
 - Using correct statuses
 - Following up on time
 - Respecting client requests
 - Protecting WEB-OS data
 - Asking when unsure
 - Not promising anything unapproved
 - Not collecting money personally
 - Not working privately with WEB-OS clients
 - Keeping communication professional
-

33. Sales Meeting Booking Rules

When a client is interested, the caller should try to book a meeting or call with WEB-OS management.

The caller should collect:

- Client name
- Business name
- Phone number
- Preferred contact channel
- Current website status
- What the client needs
- Budget indication if possible
- Best time for meeting
- Decision maker name if possible

The caller must add the meeting details to the dashboard.

34. Follow-Up Rules

Follow-up is important.

If a client says “call me later,” the caller must:

- Set a callback date and time
- Add notes
- Follow up at the correct time
- Update the dashboard after the follow-up

A lead should not be left without next action if the client showed interest.

35. Loss Reasons

If a lead is lost, the caller must choose or write the reason.

Possible loss reasons:

- No answer after multiple attempts
- Wrong number
- Not interested
- Already has website
- Price too high
- Not decision maker
- Asked not to be contacted
- Not a real business
- Bad lead data
- Chose another provider
- No budget
- Delayed decision
- Other reason

This helps WEB-OS improve the offer and lead quality.

36. Dashboard Activity History

Every important action should be recorded.

Examples:

- Caller opened lead
- Caller called lead
- Caller changed status
- Caller added notes
- Caller booked meeting
- Manager contacted lead
- Proposal sent
- Client paid deposit
- Commission became pending
- Commission paid

Activity history protects everyone.

Callers must not try to manipulate dashboard records.

37. Payment Proof and Commission Proof

When a client pays, WEB-OS should record payment proof internally.

The caller should be able to see commission-related information such as:

- Deal value
- Amount paid by client
- Commission percentage
- Commission amount
- Commission status
- Payment date
- Paid or pending status

Callers may not see all private business data, but they should see enough to trust the commission process.

38. Money Flow Summary

The money flow is:

1. Caller brings or qualifies a lead
 2. Lead is logged in dashboard
 3. Client becomes interested
 4. Meeting or sales call happens
 5. WEB-OS gives approved price and scope
 6. Client pays deposit or full amount
 7. Payment is confirmed
 8. Caller commission is calculated from received money
 9. Commission becomes pending
 10. Commission is paid according to payout rules
 11. Remaining client payments create new commission payments if applicable
-

39. What Counts as a Closed Deal

A deal is closed only when the client pays.

Not closed:

- Client said "I am interested"
- Client asked for price
- Client asked for demo
- Client booked meeting

- Client said “send me details”
- Client said “I will pay later”
- Client verbally accepted

Closed:

- Client paid deposit
 - Client paid full amount
 - Payment was confirmed by WEB-OS
-

40. What Counts as a Qualified Lead

A qualified lead is a lead that has real business potential.

A qualified lead usually has:

- Real business name
- Working phone or social media
- Correct niche
- Decision maker or staff contact
- Interest in website or online presence
- Need for WEB-OS service
- Clear next step

Not every call is a qualified lead.

41. Caller Training Rules

Before starting, every caller should understand:

- WEB-OS offer
- Website package differences
- Basic pricing range
- What they can say
- What they cannot say
- Dashboard usage
- Lead status meanings
- Commission rules
- Lead ownership rules
- Follow-up rules
- Do-not-contact rules
- Dispute rules

A caller should not start contacting leads before understanding these rules.

42. Approved Basic Pitch

Callers may use this basic pitch:

Hello, I am calling from WEB-OS. We help Algerian travel agencies build professional websites where clients can see offers clearly and contact the agency directly through WhatsApp. I saw your agency online and wanted to ask if you already have a website or if you are interested in improving your online presence.

The pitch can be adapted depending on the client, but the caller must keep it honest and professional.

43. What the Caller Should Focus On

The caller should focus on:

- Starting the conversation
- Understanding the client situation
- Finding pain points
- Creating curiosity
- Booking the next step
- Logging everything clearly

The caller should not spend too much time explaining technical development.

The goal is to move serious clients to WEB-OS management for closing.

44. Common Client Objections and Caller Response Direction

“We already have a website.”

Caller response direction:

- Ask if the website brings direct inquiries
- Ask if it is updated with offers
- Ask if it works well on mobile
- Ask if they want a quick review

“We only use Facebook/Instagram.”

Caller response direction:

- Explain that social media is good, but a website gives more trust and organizes offers better
- Mention WhatsApp contact can still be included

“It is expensive.”

Caller response direction:

- Do not argue
- Mention that WEB-OS has different packages depending on needs
- Offer to schedule a quick call to understand what they need

“Send me details.”

Caller response direction:

- Send approved message or demo
- Log the action
- Schedule follow-up

“Call me later.”

Caller response direction:

- Ask for exact time
- Set callback in dashboard
- Follow up on time

45. Client Scope Rule

The client gets only what is included in the agreement.

If the client asks for extra work after the agreement, it is paid separately.

Examples of extra paid work:

- New page
- New section
- New feature
- New language
- Admin panel

- Booking system
- Payment system
- Logo design
- Copywriting
- Monthly updates
- Redesign
- Advanced SEO
- Social media management
- New integrations

Callers must not say extra work is free.

46. Revisions Rule

WEB-OS may include limited revisions depending on the package.

Recommended rule:

- Starter package: 1 revision round
- Professional package: 2 revision rounds
- Premium package: 2 to 3 revision rounds

A revision means improving or adjusting agreed work.

A revision does not mean adding new features that were not agreed.

47. Client Content Rule

The client is responsible for providing required content unless WEB-OS agrees otherwise.

Client content may include:

- Logo
- Agency name
- Services
- Offers
- Images
- Contact information
- Social media links
- Text
- Prices if needed
- Legal information if needed

If the client delays sending content, the project delivery may also be delayed.

Callers must not promise delivery time without considering client content.

48. Delivery Time Rule

Delivery time depends on project complexity and client cooperation.

Approximate delivery ranges:

- Starter: 3 to 5 days
- Professional: 5 to 10 days
- Premium: 10 to 20 days or more

These are estimates, not guaranteed deadlines unless confirmed by WEB-OS management.

49. Refund and Cancellation Rule

If a client cancels, disputes, or requests a refund, WEB-OS management will review the situation.

Caller commission may be affected if:

- The payment is refunded
- The deal was cancelled before work started
- The caller made false promises
- The client was misled
- The project scope was not properly explained

Commission is based on real received and kept money.

50. Final Agreement Confirmation

By working with WEB-OS as a caller, the caller confirms that they understand and accept:

- This is commission-based work
- Commission is paid only from confirmed client payments
- The dashboard is the official source of truth
- Leads must be registered correctly
- Lead ownership is protected when properly recorded
- Callers cannot make unauthorized promises
- Callers cannot collect money personally
- Callers must protect WEB-OS data
- Callers must respect clients

- WEB-OS has the right to review disputes and commissions
 - New features and extra client requests are paid separately
 - No free long-term maintenance is included unless written in the client agreement
-

51. Caller Acknowledgement

Caller name:

Date:

Phone number:

Email or account:

Signature or confirmation:

I confirm that I have read and understood the WEB-OS Caller Guidelines & Commission Agreement. I agree to follow the rules, use the dashboard correctly, protect client data, and work professionally with WEB-OS.
